■ Nintendo  
■ Take-Two Interactive

## Year of Release

1985 to 2016

## Genre

All

## Who Published the Most Games?

## Top Selling Games

## For Which Platforms were Games Developed?

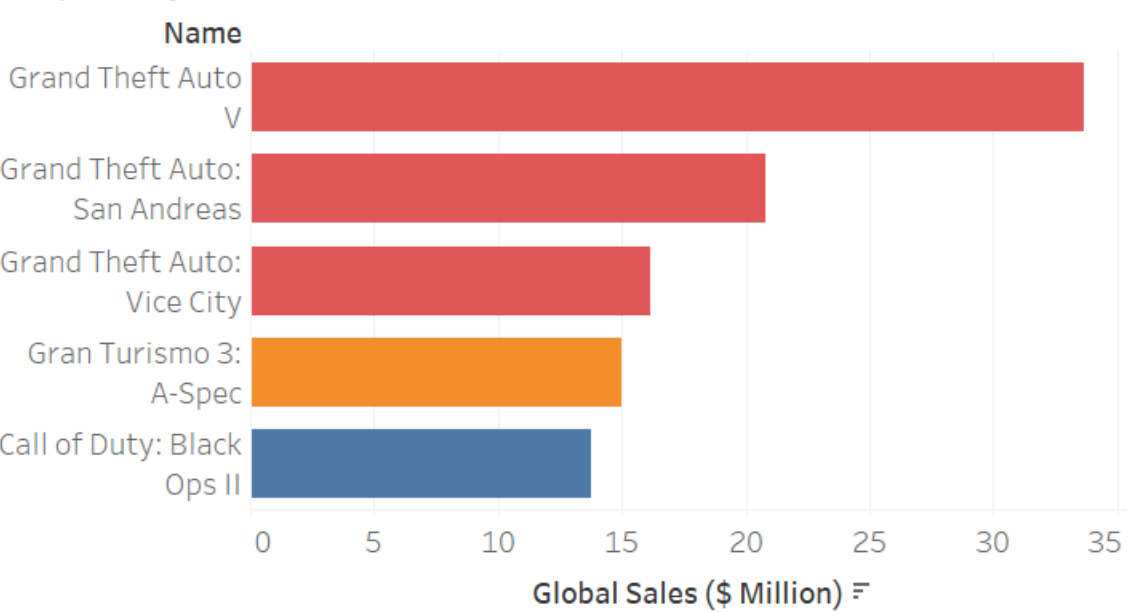

# Xbox vs Playstation

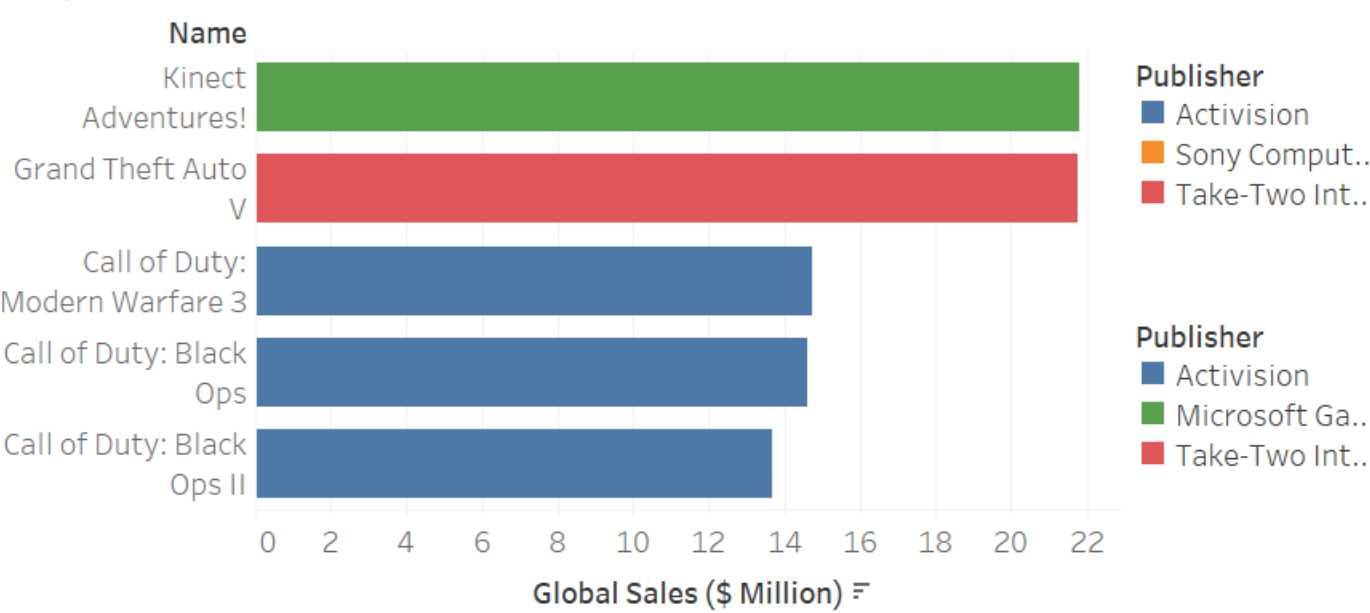

Number of Games Released

Top Playstation Games

Top Xbox Games

# Ratings Breakdown

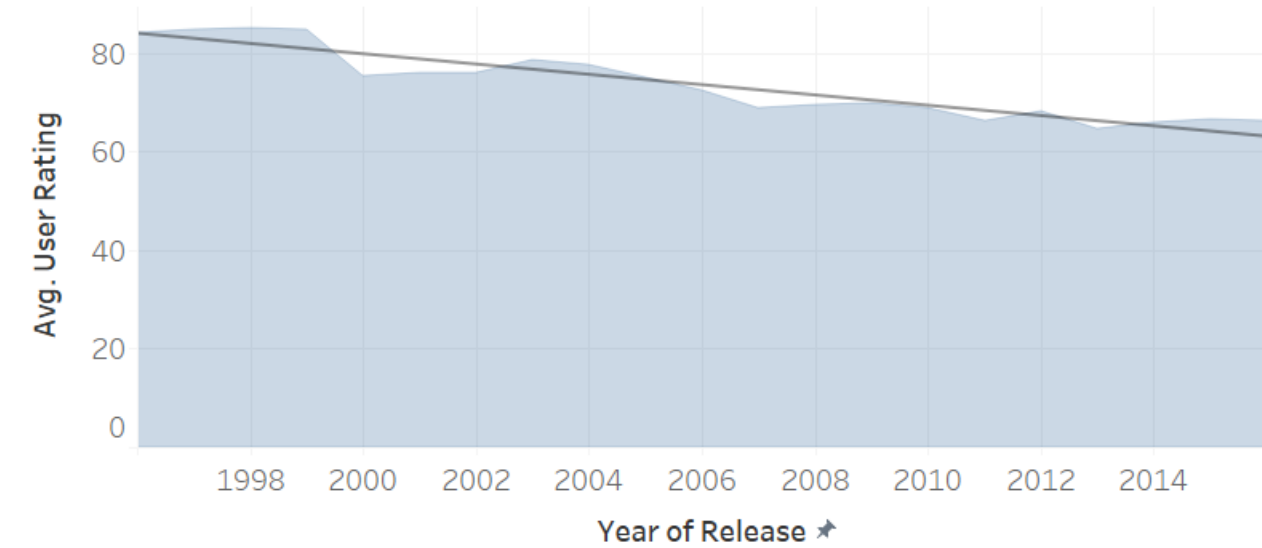

## Ratings Histogram

## Ratings Consistent Across Genres

## User Ratings Declined Over Time

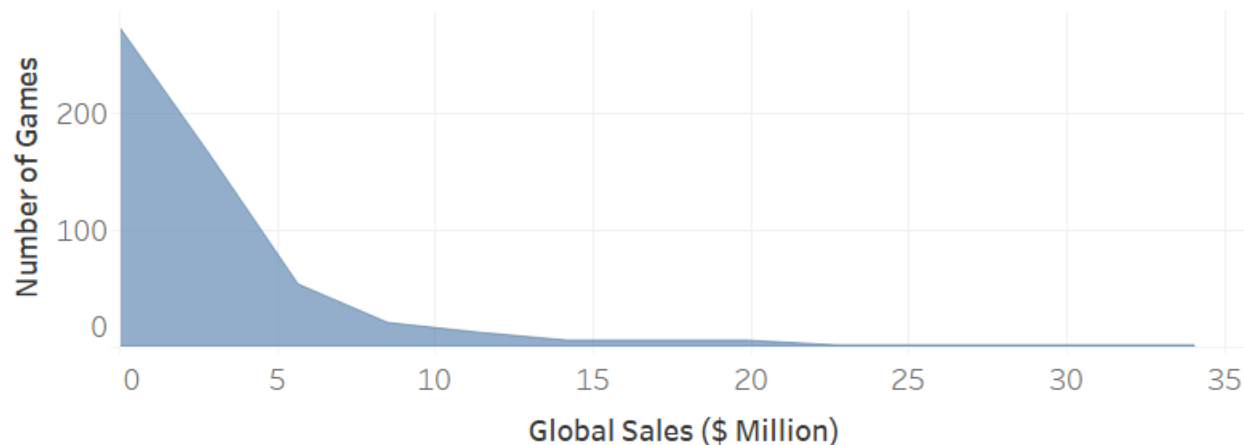

## Adult Only Games Received Higher Ratings

# How to Improve Sales

## Understand the Uneven Distribution of Sales

Most games generated less than \$6 million in sales. A select few games made a LOT more than that.

## Focus on North American and European Markets

This chart shows the percentage of global sales that came from each region. Most of a video game's sales come from North America and Europe.

## Go for Mature and Adult Only Content

Games with Mature and Adult Only content tend to generate higher average sales.

## Don't Worry Too Much About Ratings

Less than 4% of the variation in (the natural log of) a game's sales can be explained by variations in its user ratings. This suggests that user ratings are not *too* correlated with a game's sales.

# Comparing Publishers

*A publisher can also increase sales by taking note of which publishers regularly succeed and which publishers struggle.*

*Conducting more research on the most successful publishers would allow us to discover how their teams operate and how they meet sales targets.*

Publishers with Lowest Average Sales

# of Publishers  
5

Year of Release  
1988 to 2016

Limited to publishers who have released at least 10 unique titles in a designated time period.

Publishers with Highest Average Sales

Publishers with Highest Average Ratings

# Behind the Scenes

---

The SQL that made these dashboards possible

# Creating a Database

---

Before I started creating any charts or visualizations in Tableau, I first created a database using PostgreSQL.

```
ken@dellxps: ~  
ken@dellxps:~$ sudo -u postgres psql  
psql (12.8 (Ubuntu 12.8-0ubuntu0.20.04.1))  
Type "help" for help.  
  
postgres=# CREATE DATABASE gaming;  
CREATE DATABASE  
postgres=# \c gaming  
You are now connected to database "gaming" as user "postgres"  
gaming=#
```

# Creating a Table

---

After setting up the database, I created a table called 'game\_sales' for the videogame sales data.

I paid close attention to ensure that each column took the correct data type (text, int, float, etc).

```
CREATE TABLE game_sales (  
    name TEXT,  
    platform VARCHAR(10),  
    year_released INT,  
    genre TEXT,  
    publisher TEXT,  
    na_sales FLOAT,  
    eu_sales FLOAT,  
    jp_sales FLOAT,  
    other_sales FLOAT,  
    global_sales FLOAT,  
    critic_score FLOAT,  
    critic_count INT,  
    user_score FLOAT,  
    user_count INT,  
    developer TEXT,  
    rating TEXT  
);
```

# Importing the Data

---

After setting up the game\_sales table, I copied the contents of the csv file into it.

Here's the syntax I used.

```
user_score FLOAT,  
user_count INT,  
developer TEXT,  
rating TEXT  
);  
  
--Import our dataset all_games.csv into  
--Note: you may want to COPY FROM an abs  
sv somewhere specific in your file syste  
COPY game_sales FROM 'all_sales.csv'  
DELIMITER ','  
CSV HEADER  
NULL '';  
  
--How many unique titles do we have in o  
SELECT COUNT(DISTINCT(name)) FROM game_s
```

# Distinct Game Titles

---

I first wanted to know how many unique titles were in the dataset, so I ran a query to COUNT how many DISTINCT values were in the name column.

The value returned is 11553, meaning there are 11553 unique console game titles in the data table.

```
ken@dellxps: ~  
ken@dellxps:~$ sudo -u postgres psql  
psql (12.8 (Ubuntu 12.8-0ubuntu0.20.04.1))  
Type "help" for help.  
  
postgres=# \c gaming  
You are now connected to database "gaming" as user "postgres".  
gaming=# SELECT COUNT(DISTINCT(name)) FROM game_sales;  
count  
-----  
11553  
(1 row)  
  
gaming=#
```

# Distinct Publishers

---

I then ran a similar query for the publishers column.

The value returned is 582, meaning there are 582 unique console game publishers in the data table.

```
ken@dellxps: ~  
ken@dellxps:~$ sudo -u postgres psql  
psql (12.8 (Ubuntu 12.8-0ubuntu0.20.04.1))  
Type "help" for help.  
  
postgres=# \c gaming  
You are now connected to database "gaming" as user "postgres".  
gaming=# SELECT COUNT(DISTINCT(name)) FROM game_sales;  
count  
-----  
11553  
(1 row)  
  
gaming=# SELECT COUNT(DISTINCT(publisher)) FROM game_sales;  
count  
-----  
582  
(1 row)  
  
gaming=#
```

# Game Titles From Nintendo

---

Next, I wanted to see all the game titles Nintendo released, so I ran a SELECT statement to return all values in the name column WHERE Nintendo was the publisher.

The screenshot at the bottom shows the first part of the query's output.

```
--Get all titles of games published by Nintendo  
SELECT name FROM game_sales  
WHERE developer = "Nintendo";
```

```
-----  
-----  
Baseball  
Mario Bros.  
Mahjong  
Donkey Kong  
Donkey Kong Jr.  
Popeye  
Duck Hunt  
Excitebike  
Golf  
Tennis  
Pinball
```

# PS3 Games in 2011

---

I wanted to restrict the table to just the top 100 PS3 games released in 2011, measured by global sales. I only wanted each game's name and global sales.

The screenshot at the bottom displays the first part of the output.

```
--Get top 100 PS3 games released in 2011 as measured by global sales
SELECT DISTINCT(name), global_sales FROM game_sales
WHERE year_released = 2011 AND platform = 'PS3'
ORDER BY global_sales DESC
LIMIT 100;
```

| name                           | global_sales |
|--------------------------------|--------------|
| Call of Duty: Modern Warfare 3 | 13.32        |
| Battlefield 3                  | 7.17         |
| Uncharted 3: Drake's Deception | 6.74         |
| FIFA 12                        | 6.65         |
| The Elder Scrolls V: Skyrim    | 6.41         |
| Batman: Arkham City            | 5.48         |
| Assassin's Creed: Revelations  | 4.22         |
| LittleBigPlanet 2              | 3.39         |
| L.A. Noire                     | 3.17         |
| Mortal Kombat                  | 2.84         |
| Killzone 3                     | 2.77         |
| Final Fantasy XIII-2           | 2.63         |
| Saints Row: The Third          | 2.47         |

## EA's Dominance in 2011

---

I wondered how many of these games were published by Electronic Arts, so I ran a nested query to find out. The inner query returns the output shown in the last slide. The outer query selects the entries in the output with a publisher value of 'Electronic Arts'.

The number 56 is returned, meaning Electronic Arts made 56 of the 100 top selling PS3 games released in 2011.

```
SELECT COUNT(*) FROM game_sales
WHERE name IN (
    SELECT name FROM game_sales
    WHERE year_released = 2011 AND platform = 'PS3'
    ORDER BY global_sales DESC
    LIMIT 100)
AND publisher LIKE '%Electronic Arts%' OR publisher LIKE '%EA%';
```

```
gaming(# LIMIT 100)
gaming-# AND publisher LIKE '%Elect
count
-----
      56
(1 row)

gaming=#
```

# Top Selling Games Released in 2016

---

Here's a query that returns the entries of the top 100 selling games released in 2016.

```
--Find the top selling 100 games of 2016.  
SELECT DISTINCT(name), publisher, global_sales, platform FROM game_sales  
WHERE year_released = 2016  
ORDER BY global_sales DESC  
LIMIT 100;
```

|                                | global_sales | name | platform | publisher                   |
|--------------------------------|--------------|------|----------|-----------------------------|
| FIFA 17                        | 7.59         |      | PS4      | Electronic Arts             |
| Pokemon Sun/Moon               | 7.14         |      | 3DS      | Nintendo                    |
| Uncharted 4: A Thief's End     | 5.38         |      | PS4      | Sony Computer Entertainment |
| Call of Duty: Infinite Warfare | 4.46         |      | PS4      | Activision                  |
| Battlefield 1                  | 4.08         |      | PS4      | Electronic Arts             |
| Tom Clancy's The Division      | 3.8          |      | PS4      | Ubisoft                     |
| FIFA 17                        | 2.65         |      | XOne     | Electronic Arts             |
| Call of Duty: Infinite Warfare | 2.42         |      | XOne     | Activision                  |
| Far Cry: Primal                | 2.36         |      | PS4      | Ubisoft                     |

# Multiple Platforms Not Required

I wondered how many platforms the top selling games were released on, so I decided to run yet another query.

The values in the platform count column are varied. Some of the top selling games were released on 5 platforms, some were released on just one. Releasing a game on several platforms is NOT a requirement for getting sales.

```
--List all games, ordering them by descending global sales
--How much did each game sell worldwide?
--How many platforms were each of these games released on?
SELECT name, SUM(global_sales) s, COUNT(DISTINCT(platform)) FROM game_sales
GROUP BY name
ORDER BY s DESC;
```

|                                | s     | count |
|--------------------------------|-------|-------|
| Wii Sports                     | 82.53 | 1     |
| Grand Theft Auto V             | 56.57 | 5     |
| Super Mario Bros.              | 45.31 | 2     |
| Tetris                         | 35.84 | 2     |
| Mario Kart Wii                 | 35.52 | 1     |
| Wii Sports Resort              | 32.77 | 1     |
| Pokemon Red/Pokemon Blue       | 31.37 | 1     |
| Call of Duty: Black Ops        | 30.82 | 5     |
| Call of Duty: Modern Warfare 3 | 30.59 | 4     |
| New Super Mario Bros.          |       |       |

# Thank you for your time!

---

I learned a lot about the console game market through this project,  
and I hope you learned something interesting too!
